ASSOCIATE PRODUCT MANAGER | AI/ML SAAS PRODUCTS | PRODUCT OWNERSHIP/DELIVERY

AI Product professional with 8+ years of overall experience delivering enterprise products that improve retail execution for global FMCG organizations. 3.6+ years of experience as an APM. Partner with Engineering, Data Science, and Customer Success teams to translate customer problems into scalable AI capabilities, and features balancing technical feasibility with business needs.

Contributed to AI deployments across 20+ international markets in EMEA, APAC, LATAM, North America, improving model accuracy from 88% to over 94%, enabling expansion into new markets, and helping enterprise customers make faster, more reliable operational decisions through AI-powered products. Brings a strong technical foundation, structured problem-solving approach, and a passion for building AI products that solve real-world business problems.

CORE SKILLS

Product Management - Requirements Gathering • Product Lifecycle Management • Functional Scoping • User Stories • Acceptance Criteria • Backlog Refinement • Stakeholder Management • Cross-Functional Collaboration • Release Planning • Product Documentation • Agile Delivery

AI / ML Product Management - Computer Vision Products • AI/ML Product Delivery • Model Validation • Model Governance • Training Data Strategy • AI Performance Analysis • Deployment Readiness • AI Product Scaling • Production Monitoring

Delivery & Operations - Workflow Design • Process Optimization • KPI Tracking • Risk Identification • Root Cause Analysis • Production Support • International Deployments • Continuous Improvement

Tools & Methodologies - JIRA • Azure DevOps • SQL • Postman • Agile • Scrum • Excel

PROFESSIONAL EXPERIENCE

Associate Product Manager | Vision Group | Jan 2023 – Present

Product Management

- Own product requirements, functional scoping, user stories, acceptance criteria, and release readiness for AI-powered Computer Vision solutions supporting a global retail intelligence platform serving 340+ enterprise customers across 75+ countries, with deployments spanning 20+ international markets.
- Translate business problems and customer requirements into implementation-ready product capabilities by partnering with Product, Engineering, Data Science, Operations, and Customer Success teams throughout the product lifecycle.
- Prioritize user story implementation based on technical dependencies, facilitating sprint execution across 2–3 concurrent AI capabilities while balancing regional delivery requirements too.
- Proposed and Owned workflows, introducing a dedicated experience to identify brands of interest being consumed indirectly. Owned an Audit Review Workflow, enabling supervisors to review and approve field surveys that initially took weeks to generate report but are now done in real-time.

AI Product & Model Performance

- Improved AI Menu Intelligence model accuracy from ~88% to >94% by benchmarking successive model versions, validating against standardized ground truth datasets, and partnering with Data Science to refine training data and improve SKU and price recognition.
- Improved Cooler Visibility Detection model accuracy by 5% by aligning stakeholders on edge-case expectations, refining annotation guidelines, and supporting model retraining around agreed trade-offs and real-world AI limitations.

- Contributed to the next-generation AI Menu Intelligence migration, improving prediction quality and enabling rollout into existing and new European markets.
- Led deployment readiness for AI capabilities including AI Menu Intelligence, Cooler Visibility Detection, Image Quality Assessment, and Image duplication, ensuring production-ready releases across multiple international markets.
- Established AI validation criteria and quality benchmarks that improved deployment consistency and ensured models met release standards before production rollout.

Cross-functional Leadership & Global Delivery

- Partner with Product, Engineering, Data Science, Operations, and Customer Success teams to resolve delivery challenges, align priorities, and translate evolving business needs into scalable AI product capabilities.
- Collaborate directly with Customer Success Managers across Asia, Europe, and North America to understand regional requirements, resolve deployment challenges, and incorporate customer feedback into product improvements.
- Present sprint deliverables, feature demonstrations, and release updates to client teams, Customer Success Managers, and senior leadership, ensuring alignment on product progress and upcoming releases.

Senior QA Engineer | Ness Technologies | Feb 2020 – Jan 2023

- Collaborated with Product Managers, Business Analysts, and Engineering teams to validate requirements and support successful delivery of enterprise software products.
- Participated in backlog refinement, sprint planning, feature reviews, and release planning activities within Agile teams.
- Led requirement validation, test strategy planning, defect triage, and cross-functional coordination across multiple product releases.
- Worked closely with stakeholders to improve feature quality, usability, release readiness, and customer experience.
- Supported delivery teams in identifying risks, resolving production issues, and improving release outcomes through structured quality processes.

QA Engineer | Copper Mobile Pvt. Ltd. | Mar 2018 – Dec 2019

- Developed test strategies and quality assurance plans for enterprise mobile applications across multiple business domains.
- Collaborated with Product Managers and Engineering teams during requirement analysis, feature validation, release testing, and stakeholder reviews.
- Supported delivery of business-critical mobile solutions by ensuring product quality, functional accuracy, and release readiness.

EDUCATION

- Master of Technology (M.Tech), Wireless Communication - 2016
- Bachelor of Technology (B.Tech), Electronics & Communication Engineering - 2014
